

GEX 4.0

How to Enter the Market

3 THINGS TO CHECK

① Momentum Score

② GEX Levels (ZGL, CW, PW)

③ Reversal Alerts

Dashboard: <http://137.220.63.222>

① Momentum Score

The market thermometer — always visible on screen

Momentum Score (0-100) shown in the SCALPING SIGNAL panel

SCORE	MEANING	ACTION
< 30	Oversold — bounce likely	Look for LONG
30–60	Neutral — no directional trade	STAY OUT
> 70	Overbought — drop likely	Look for SHORT

② GEX Levels on the Chart

Yellow, green and red horizontal lines — here's what they mean

COLOR	LEVEL	MEANING	WHEN TO ENTER
YELLOW	0GEX (ZGL)	Equilibrium point — reversal trigger	Price returns toward ZGL from far away
GREEN	CW (Call Wall)	Resistance — MM must sell	Price rises to CW + Score > 70
RED	PW (Put Wall)	Support — MM must buy	Price drops to PW + Score < 30

- Find these levels as colored horizontal lines on the ES/NQ chart at the top
- ZGL (0GEX) is where the market is in equilibrium — closer = more likely reversal
- Call Wall (green) = resistance. Put Wall (red) = support

③ Reversal Alerts

The system tells you when to enter — in the ALERTS panel

ALERT	WHAT IT MEANS	WHAT TO DO
▲ SPX REVERSAL BULLISH	Price is bouncing — bullish bias	Enter LONG near the Put Wall
▼ QQQ REVERSAL BEARISH	Price is falling — bearish bias	Enter SHORT near the Call Wall

- Alerts appear in the ALERTS panel at the bottom right
- Confluence = how much the indicators agree (higher = safer)
- Example: 'Confluence: 76%' means 3 out of 4 indicators say LONG

■ Practical Example: LONG on ES

Bullish setup right now

CURRENT ES SETUP (US500-F)

- Momentum Score: **69%** → BEARISH (near 70 = overbought)
- ZGL (OGEX): **7177** — current price 7179
- Alert: **▲ SPX REVERSAL BULLISH** with Confluence 76%
- Key Level: 7120.3 (Put Wall)

ACTION	PRICE	NOTE
■ WAIT	Pullback to 7120–7130	Price must return toward PW
■ GO LONG	~7125	Above Put Wall
■ STOP LOSS	7112	Below PW — risk 13 pts = \$650
■ TARGET 1	7155	Close half — 3:1 ratio
■ TARGET 2	7177	ZGL — close full position

■ Practical Example: SHORT on NQ

Bearish setup right now

CURRENT NQ SETUP (NAS100-F)

- Momentum Score: **69%** → BEARISH (above 70 = overbought)
- ZGL (OGEX): **26910** — current price 26885
- Alert: ▼ **QQQ REVERSAL BEARISH** with Confluence 74%
- Call Wall: ~26905 (near current price)

ACTION	PRICE	NOTE
■ WAIT	Rally to 26900–26920	Price must rise toward CW
■ GO SHORT	~26905	At the Call Wall
■ STOP LOSS	26920	Above ZGL — risk 15 pts
■ TARGET 1	26750	Close half position
■ TARGET 2	26600	Structural support

■ Entry Checklist

Before entering — check EVERYTHING

#	CHECK	WHERE TO LOOK	✓
1	Score < 30 (long) or > 70 (short)	Scalping Signal panel	[]
2	Price near PW (long) or CW (short)	Chart — red or green line	[]
3	Reversal alert is active	ALERTS panel at bottom	[]
4	Confluence > 70%	Shown in the alert itself	[]
5	Stop loss beyond the GEX level	Calculate before entry	[]

✗ If even 1 check is missing — DO NOT enter

✓ If all 5 checks pass — enter with confidence

■ ■ Risk Management

Fixed rules — never break them

RULE	HOW TO APPLY
MAX RISK	Never risk more than 1% of account per trade
STOP LOSS	Always beyond the GEX level (PW or CW)
TAKE PROFIT	At next GEX level — close half, move stop to breakeven
NO AVG DOWN	Never add to losing positions
MIN R:R	3:1 mandatory — if target is less than 3x the stop, skip the trade

GEX 4.0

Trade with Intelligence

THE 3 PILLARS

- ① Momentum Score → When the market is extended
- ② GEX Levels → Where the market bounces
- ③ Alert System → When to enter

Dashboard: <http://137.220.63.222>

Remember: discipline > intuition. Follow the checklist every time.
